Nexio Digital Networking Solutions

Enabling business through cutting-edge connectivity

The ability to stay connected has become an essential requirement in our global society.

Technology-enabled collaboration has become a fundamental tool for driving better business outcomes and productivity.

Connected

Collaborate

Mobility

Collaboration ensures more accessibility for employees with various devices from various locations.

This allows them to work together in a unified environment. It also enables faster and more responsive teams and better customer service.

However, this need for collaboration has changed the nature of the enterprise network, posing a number of challenges. The audio, video and other resources used by collaboration tools can cause latency and congestion.

As network traffic increases, it is driving the adoption of hyper-converged networks to deal with these challenges.

Benefits of the Nexio Digital Networking solution

Services led approach

Seamless communication not only reduces costs but also increases employee productivity

Competitive advantage and enhanced customer service

The network of the future

Advanced networking is the unsung hero of our digital future. It offers connectivity that can drive the development of new products and services or transform inefficient operating models.

Where networking traditionally lived in the shadow of high-profile disruptive technologies, it is now transforming enterprise architecture. In fact, advanced connectivity is fast becoming a linchpin of digital business.

A host of advanced networking capabilities can be used to enhance products, services and enterprise architectures. Connectivity strategies can support a broader digital agenda.

Modern networking technologies are being used to build controllable, secure, distributed networks that feature different kinds of devices and have the ability to utilise distributed computing power.

New networking models can transform an organisation's agility, efficiency and competitiveness—but only to the extent that they can reliably deliver connectivity, security and performance.

In order to achieve business goals, the company's network must enable anyone to connect on any device, at any time. Advanced connectivity raises the bar on network flexibility, making it possible to configure networks to fit different types of performance and availability requirements.

Collaborate

Mobility

Connected

Seamless connectivity

Nexio enables you to modernise your environment and adopt new technologies, helping to solve legacy problems and paving the way for your future digital success.

With Nexio, your organisation will no longer be hindered by technology, but rather freed to see what's next and to proactively embrace new business opportunities with confidence.

Enabling seamless and secure connectivity and mobility across the enterprise, Nexio's collaboration offering builds on our networking capabilities to bring together voice, video and data technology.

This allows businesses to utilise multiple communication modes across a single secure network, enabling an "any device, anytime, anywhere" strategy.

In addition, we provide a fully managed service across multiple locations.

The Nexio Digital Networking solution

- Offers secure borderless networking
- Enables voice, video and web conferencing, as well as messaging, mobile applications and enterprise social software.
- Offers a flexible means of communicating and collaborating more naturally, anywhere, anytime, with anyone
- Delivers mobile collaboration on any device

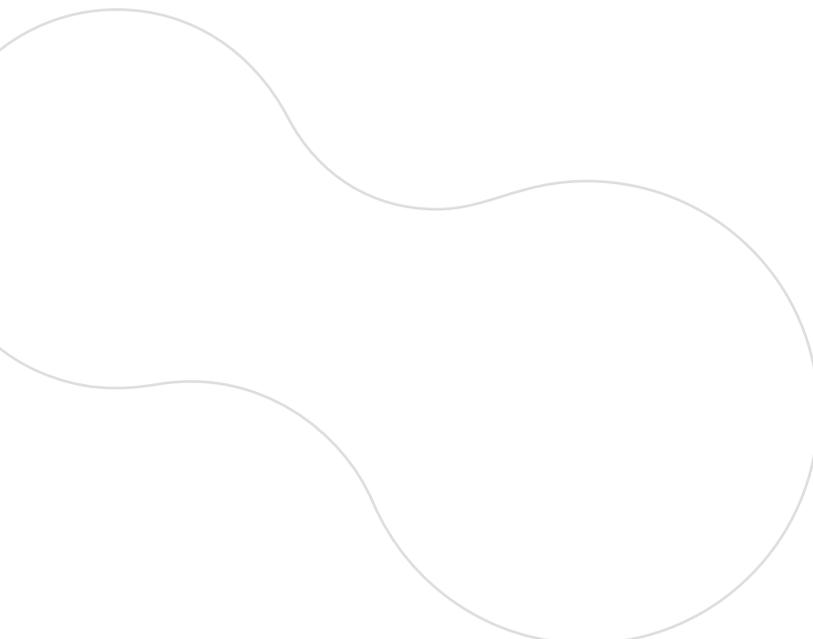

Our connectivity solutions include a range of technology offerings that enable secure advanced networking, collaboration and transformation.

Digital transformation, enterprise agility, mobility and cloud technology features such as serverless computing are all dependent on advanced connectivity.

However, with advanced capabilities comes higher network complexity.

Nexio helps lay the groundwork for new networking models in your enterprise, providing a catalyst to accelerate both information and operational technology.
