# Strategising security

Where intelligence, insight  
and consultancy meet

With a diversity of operating systems and numbers of platforms in use today, as well as the advent of AI and machine learning, now is the time for new rules.

Every company has existing security investments, but the FUD (fear, uncertainty and doubt) factor is one of the main reasons that they continue adding new products and tools to their security portfolios.

360° View

Visibility

In today's threat landscape, it might seem to make sense. But these types of investments might not be necessary. In many cases, companies can get more out of their existing investments.

Similarly, existing frameworks can be combined to ensure that governance and security become a strategic asset. Too often, companies localise management of specific risk areas within individual departments rather than approach it through a comprehensive plan.

Vulnerability management will minimise the risk of a data breach. But without placing vulnerabilities into the context of the risk associated with them, organisations can misalign their remediation resources.

## Enabling business strategy through security and governance

Security has changed. It is no longer simply about boxes, solutions and products. It is about intelligence, insight and consultancy. It is no longer a one-off or monthly transaction. It is an on-going journey that needs to adapt as cyber threats evolve, technologies develop and business needs change.

Businesses need to align themselves with a strategic security partner who understands this shift and recognises the need to grow alongside their customers. Security must enable the business strategy of the company. It must cover every area of a business, from regulatory requirements, to the employees, to beyond the perimeter.

Preventing and responding to cyber risks requires real-time visibility into the real-time cyber environment.

### **This requires knowing the answers to these questions:**

- How accurate are your network breach detection systems?
- How responsive are your security and risk teams to known threats?
- Where do your risks lie?

Answering these questions is easier said than done. With new technologies disrupting traditional business models, we can't expect the supplier relationships of the past to remain unchanged. Thinking differently is required.

## Benefits of the Nexio approach to security

**Do more with existing investments**

**Comprehensively identify the security gaps in your infrastructure using actionable insights for proper remediation**

**Complete understanding of the cyber risk profile of the business**

**Deal with real-world, moving-target cyber threats**

## Doing more, with less

**Nexio unites unique combinations of technology know-how and professional service expertise to make real-time security a reality.**

We optimise security operations to work in a real-time environment, and beyond the traditional security perimeter. Our solution includes pulling cyber response teams together when required, as well as incident management and response.

We embrace threat analysis from varying perspectives to deliver an even fuller view of the cyber-threat environment for customers.

## We provide a complete managed security service that considers risk, governance, compliance, people, process and technologies.

We liaise with the appropriate departments and teams within your business to deliver a consolidated and fully integrated solution.

Our integrated solution starts with an evaluation of what is already in your environment. We help make sure you get the most out of your existing investments. This can make an immediate difference to your security posture. Our analysis and enhancement of your current environment provides the ideal foundation to build a more secure organisation.

## The Nexio security solution

- Provides provide a complete managed security service that considers risk, governance, compliance, people, process and technologies
- Approaches governance, risk and security as a whole
- Leverages the expertise of skilled consultants across all specialisations and areas
- Extends the benefits of existing solutions
- Ensures complete visibility
- Includes automation and orchestration
- Provides guidance on security posture
- Use of industry-leading solutions to assist with normal pentesting if required
- Is a fully managed service, guaranteeing peace of mind

We offer a single port of call for all your security needs. Where possible, we consolidate all your security according to the organisation's specific requirements. Nexio's comprehensive solution provides greater visibility and capability. Our skilled consultants provide guidance, advising on how best to achieve a real-time awareness of your security posture and strategy.

We also ensure that implementing data privacy and meeting compliance requirements become an opportunity to grow the business, rather than just an additional cost. We have established long-standing security, data protection, and privacy programmes. Our consultative approach ensures that all your security initiatives always tie into what the business needs, and what it is currently doing.

Ultimately, the chances any business will undergo some form of cyber attack are quite good. What matters most is the ability to recognise a breach and mobilise to remediate the attack and control the damage.

**To stay ahead of the threats, look for a strategic partner and not a transactional supplier. Look to Nexio.**

We enable our clients to modernise their environments and adopt new technologies. We help them to solve their legacy problems and pave the way for their future digital success.

With Nexio, your organisation will no longer be hindered by technology, but rather freed to see what's next and to proactively embrace new business opportunities with confidence.

**Speak to a Nexio consultant today to secure your business.**
