Nexio Data Management and Big Data Solutions

Getting value from data

So much of the data management and data analytics space remains focused on the mechanics.

The mechanics are important, of course, but they are not the reason that any of these disciplines exist.

Simplify

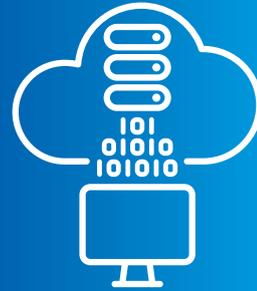

360° View

Digitise

When it comes to data management and analytics, the value does not come from collecting the data or insight.

Value comes from just one thing: action.

Nexio provides the tools your company needs to take action.

As more companies seek out digital transformation projects, data management offers an opportunity to gain a competitive edge – if leveraged correctly.

Using data analytics properly is about generating actionable insights. It's about informing and improving decision-making. If a company loses sight of that, they may end up wasting their time and resources.

Using data management properly is about generating actionable insights that can inform and improve decision-making. Companies have to know what advantage they want to gain, and how they can use insights derived from their data in order to reach such advantage.

Benefits of the Nexio data solution

World-class security and compliance

Full analytics capabilities ensures actionable insights

Complete 360-degree view of the entire environment

**Comprehensive data management
Reduced complexity through improved visibility, capabilities and functionality**

Improved business agility

A complete solution

Nexio enables companies to modernise their environments and adopt new technologies. We help them to solve their legacy problems and pave the way for their future digital success.

It means new digital capabilities on top of a strong foundation, ensuring that companies will no longer be hindered by technology, but rather freed to see what's next and to proactively embrace new business opportunities with confidence.

Nexio provides a complete solution that ensures companies get value from their data. From data creation, to security, to data management, we provide the expertise and tools that allows data analytics to provide the detailed insights that a modern company needs to stay ahead of its competitors.

We understand that security is paramount to the success of any data initiatives. We secure information when it is created, where it is stored, and safeguard access to the data.

Our solution is customised to the needs of each customer. It includes compliance to the appropriate regulations and requirements for every industry. We also provide backup as an inherent part of the solution. This ensures that recovery is quick and easy should it ever be needed.

Nexio's solution starts with an assessment of the current environment to identify and understand the data and its ecosystem in order to offer customised management and support. Using a variety of tools, we protect the data, manage workloads, and provide advanced analytics capabilities.

360-degree view

Companies in every industry and sector are collecting terabytes and terabytes of data, looking to gain value from it. However, collecting data is a waste if the company can't make sense of it, and find ways to use it to their advantage.

By itself, data has no value. Value is created when data is used by someone in context.

That context requires looking at the bigger picture. Analytics is ultimately the final tool that companies can access in order to gain insights from their data.

However, managing information as an asset needs a 360-degree view.

This starts with an understanding of how – and where – the data is created. The next step is identifying and capturing all of the sources of data available. Moving beyond merely aggregating data relies on an equal understanding of how the data is stored.

The Nexio data solution

- Secures data throughout its lifecycle
- Administers storage and management of internal and external data
- Provides guaranteed availability at all times
- Can be managed holistically through the Nexio digital platform
- Integrates data management and analytics with the rest of the organisation's systems

With the increasing volumes of data being collected, the importance of cost-effective storage is well documented. But choosing a storage solution merely because it's the cheapest, limits companies. They don't gain the benefits from integrating the advantages of specific storage solutions into their overall data management strategy.

Storage and data management are at the heart of any big data solution, providing the physical tools that will lead to the insights and value that businesses are looking for.

Any successful data initiative requires treating insights — not just data — as a business asset.

Security

One of the biggest challenges lies in securing data. Organisations run into trouble when the data analytics team views the security team as “killjoys” or when they intentionally cut security out of the early stages of the process based on a belief that security implications will limit innovation. Organisations must incorporate robust security measures into any data initiatives.

Data initiatives have unique security requirements because of the huge volumes of disparate information involved. They operate in a distributed architecture, so adequate security will differ from normal operations. It also can't be subjected to the same standards.

In fact, a big data environment can't be secured with just one solution. Only a customised blend of tactics has a chance of completely managing the risk.

Businesses should adjust their thinking when it comes to data security efforts. They can begin by asking what specific security objectives their team is trying to achieve. From there, they can work backwards to find the custom solution that will secure the environment.

We enable companies to modernise their environments and adopt new technologies. We help them to solve their legacy problems and pave the way for their future digital success. It means new digital capabilities on top of a strong foundation.

Analytics is ultimately the final tool that companies can access in order to gain insights from their data.

With Nexio, your organisation will no longer be hindered by technology, but rather freed to see what's next and to proactively embrace new business opportunities with confidence.
