Nexio Multi-Cloud Solutions

Get the most out of your cloud

Complete management and control.
Accelerated business growth and innovation.
This is what Nexio brings to your
cloud environment.

Competing in today's digital
economy depends on the
organisation's ability to run
workloads within the most
appropriate environments

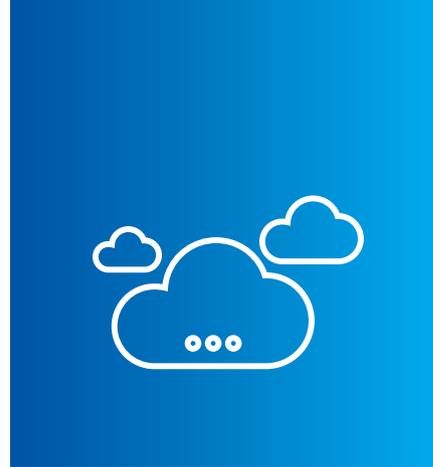

Secure

Visibility

Control

A properly managed multi-cloud architecture gives IT the freedom to seamlessly shift to the right environment, as needed.

By putting the right workload on the right cloud platform, companies have much more choice, providing new efficiencies and making it easier to embark on a longer-term transformation strategy.

Reducing the time, cost and risk of cloud transformations, Nexio eliminates complexity and helps you gain a competitive advantage in today's digital economy. We enable you to modernise your environment and adopt new technologies. We help you to solve legacy problems and pave the way for future digital success. By transitioning to the cloud with Nexio, you gain choice, visibility, cost control, and the performance needed to successfully implement business-differentiating initiatives and innovation.

Accelerating business growth and innovation

Nexio will help you develop an effective cloud strategy, aligned to your business strategy, ensuring that your technology investments continually meet your business goals. Offering complete migration and implementation services, we enable you to modernise your environment and optimise your ecosystem.

Nexio will help you establish how your infrastructure and services can best be optimised at every step.

Leveraging an extensive skills base and partnerships with leading cloud vendors, we assist you to implement the right cloud strategy for your business.

Our solution covers everything from assessments to comprehensive management and control – and everything in between. With years of expertise in infrastructure, software, platforms, services, and security, Nexio helps connect your IT ecosystem with the rest of the business. This ensures that you experience the immense benefits and potential of cloud. Offering a solution that can truly transform the entire organisation, we will help you leverage it for growth and business agility.

Whether you require a private, public, or hybrid environment, you can be assured of accessing all the right tools and the competences to ensure you can get the most out of your cloud investment.

It's a multi-cloud world

It's practically impossible to deliver best-in-class IT solutions across the enterprise without a multi-cloud strategy. In order to gain the breadth and depth of services that modern businesses need to deliver upon, they have to work across multiple cloud and on-premise infrastructures. Getting the strategy right in terms of design and operations is therefore critical.

The “multi” in multi-cloud means more. More of the right things, such as flexibility, scalability and resource optimisation. But more also means more to manage.

Where once a company had to deal with one or two strategic outsourcers, in the cloud world they're more likely contending with a dozen or more cloud service providers. Where application workloads once moved over private links inside the data centre, they're now moving across the Internet.

Where server and storage capacity once fell to IT exclusively, now anybody can grab the resources they need.

Multi-cloud solutions need to be carefully designed in order to be successful. Load balancing, health monitoring, latency, security and staff skill levels all have to be taken into consideration. Many companies are finding that the benefits they thought they were getting from their cloud implementations are disappearing based on the complexity of their multi-cloud environments. It's practically impossible to deliver best-in-class IT solutions without effective management of all the services in use, at any given moment.

Getting the most out of your cloud environment requires being very specific about your goals and desired benefits. Mapping your needs to various services and solutions is essential to right-sizing your cloud strategy, as is identifying the various cloud services that are in use, those that are planned for future use, and cross-correlating those with what you have.

Benefits of the Nexio cloud approach

Transformation leading to innovation and growth

Ensures comprehensive visibility, management and control

Optimised technology ecosystem

Cost optimisation and efficiencies

Stability, scalability and flexibility

Agility

Resilience

One-stop management and control

With visibility into the cloud ecosystem, modernised and optimised environments are easy to achieve. Management is also essential to achieving these goals. This is why we have developed a comprehensive management tool that frees you up to focus on the business, not the operations, and proactively move your organisation forward using digital technology to stay ahead of your competitors.

Integrating all of your cloud environments into the Nexio digital platform simplifies management, control and provisioning within a multi-cloud ecosystem. Providing a turnkey solution that will turn your multi-cloud chaos into a single gateway to seamless operations, Nexio's digital platform incorporates a variety of tools to ensure the visibility necessary to effectively forecast and control cloud and workload costs.

Cost control is a crucial component when leveraging a multi-cloud environment.

The combination of Nexio's cloud solutions and the digital platform enables organisations to track and analyse infrastructure costs and utilisation, identify wasted spend, and forecast future costs. This also makes management of on-premise and cloud capacity easy, allowing your business to make the most out of current and future resources.

Our digital platform enhances automation to improve operational speed. Our solution improves workflows, service performance and usability, while reducing operating inefficiencies through predictive analytics and faster cloud deployments. We also enable you to simulate migrations by selecting cloud resources and comparing costs to predict and manage cloud budgets.

The Nexio cloud solution

- Provides a complete, secure cloud solution
- A consultative-first approach to define your strategy and assist with every step of your cloud journey
- Offers a full assessment of your current solution and provides guidance for current and future needs
- Includes infrastructure, software and platforms

Nexio makes business model transformation, speedy time to market, and the ability to experiment without delays possible, accelerating the transformation initiative for businesses.

Cloud has come of age. It is one of the key elements to being a digitally-first business. It enables agile application development. It is an imperative in delivering flexible, on-demand access to the resources that underpin new digital business offerings.

However there is a big difference between simply utilising multiple cloud environments and embracing a multi-cloud strategy combined with a comprehensive management tool.

Cloud - an enabler of digital transformation

Whether companies embark on their cloud journeys in order to save costs, to gain flexibility and scalability, or to enable better and faster service delivery, they are ultimately using the cloud to develop, deploy, deliver and scale fast. This is one of the first steps to digital transformation.

Modern businesses are demanding the ability to respond quickly to market changes, to bring innovation to the market rapidly, and to counter competitive threats immediately. The agility of the cloud enables new ways for companies to meet these needs.

Companies wanting to stay ahead are finding that the cloud is the foundation of a new agile business. Cloud-based infrastructure is key to delivering flexible, on-demand access to the resources underpinning new digital business offerings.

It allows organisations to scale infrastructure as needed to support changing business priorities, while reducing the risks of wasted IT resources. However managing cloud infrastructure and services has become extremely complex.

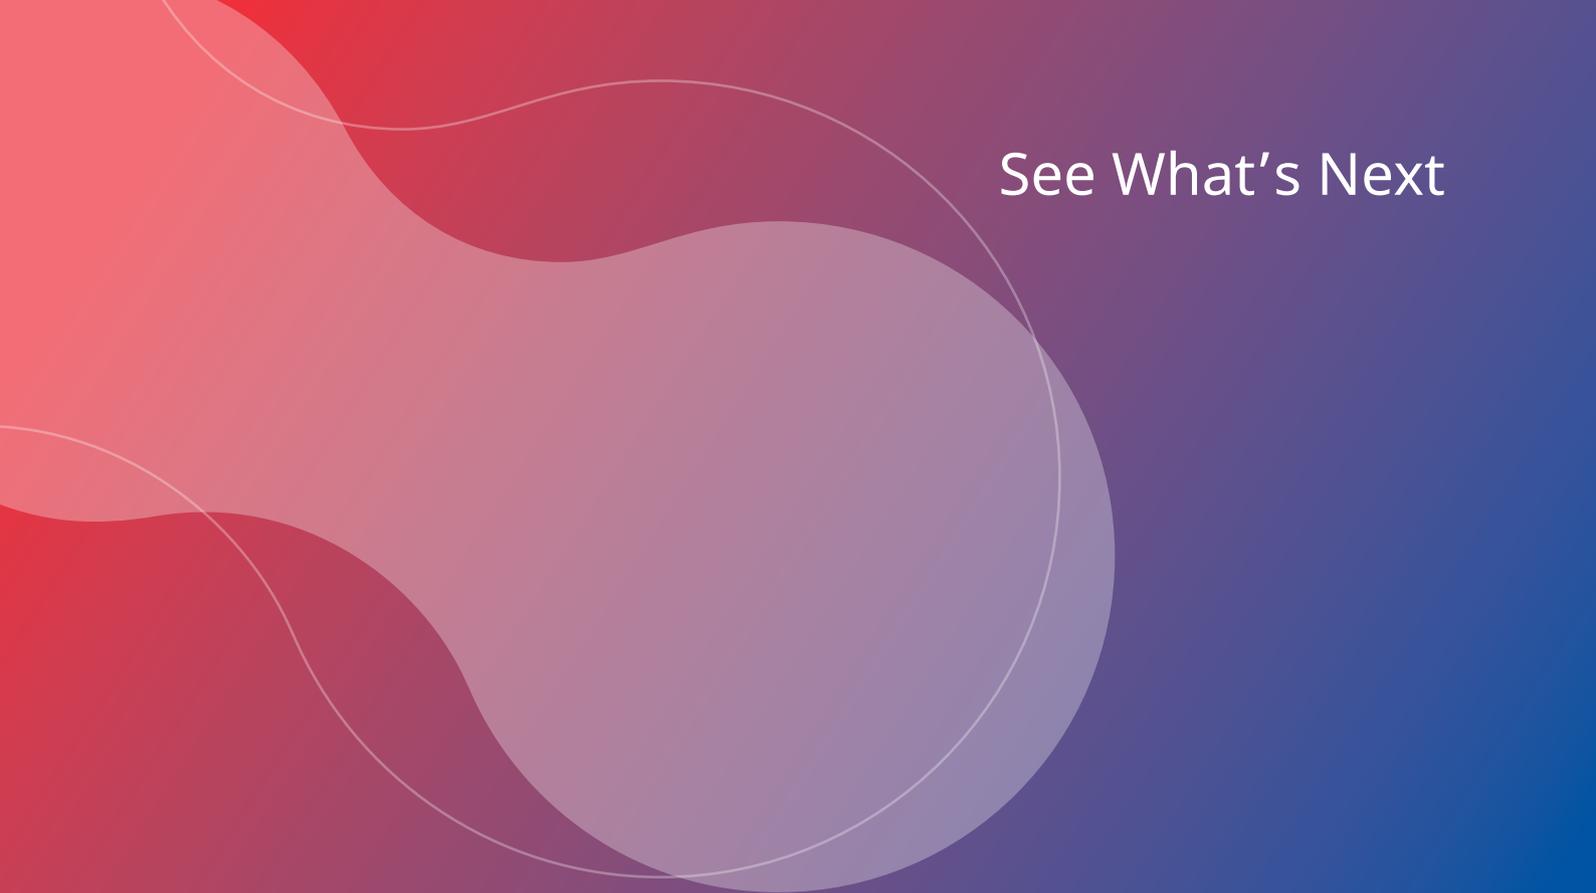

Nexio understands the drivers and challenges of the modern cloud environment, and has created a solution that allows companies to really derive the value out of their cloud investments.

Leverage the Nexio cloud expertise to enable digital transformation, change how you do business, and disrupt the market. By transitioning to the Nexio digital platform, your IT team will be free to focus more on business- differentiating initiatives and innovation.

Throughout the transition, your business will experience stability, scalability, reduced costs, flexibility, and many other benefits that will unburden your organisation in countless areas.

Leverage the Nexio cloud offering to enable digital transformation, change how you do business, and disrupt the market.

Speak to a Nexio consultant today to take your cloud ecosystem to the next level.
